

**QUE:**Find the difference between the total number of **CITY** entries in the table and the number of distinct **CITY** entries in the table.

The **STATION** table is described as follows:

STATION	
Field	Type
ID	NUMBER
CITY	VARCHAR2(21)
STATE	VARCHAR2(2)
LAT_N	NUMBER
LONG_W	NUMBER

where **LAT\_N** is the northern latitude and **LONG\_W** is the western longitude.

For example, if there are three records in the table with **CITY** values 'New York', 'New York', 'Bengaluru', there are 2 different city names: 'New York' and 'Bengaluru'. The query returns , because

**ANS:-SELECT COUNT(CITY) - COUNT(DISTINCT CITY)  
FROM STATION;**
